- 2. Citations and explanations (Rule 70.7)
 - 1. Reference is made to the following document:

FR-A-2 809 047 (COMMISSARIAT ENERGIE ATOMIQUE)
23 November 2001 (2001-11-23).

- 2. Independent claims 1 and 4
- 2.1 Independent claim 1

Document FR-A-2 809 047, which is considered to be the prior art closest to the subject matter of claim 1, describes (the references between parentheses apply to said document):

• an actuation device including at least two motors (17) that are positioned side by side (see figure 1) on a single part (1) and do not extend in a main direction of extension, and drive shafts that extend in a single direction away from said motors and in the main direction of motor extension.

It follows that the subject matter of claim 1

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

differs from this known actuation device in that:

 said actuation device further includes at least two pulleys that are at least essentially coaxial, actuated by said motors and offset along the length of said drive shafts provided, in turn, with pulley-engaging portions that are also offset.

It follows that the subject matter of claim 1 is novel (PCT Article 33(2)).

The problem that the present invention is intended to solve can therefore be considered to be that of providing a more compact actuation device.

The solution to this problem, as proposed in claim 1 of the present application, is considered to involve an inventive step (PCT Article 33(3)), for the following reasons:

No such arrangement of two motors and two at least essentially coaxial pulleys offset along the length of drive shafts, which have, in turn, pulley-engaging portions that are also offset so that the actuation device is more compact, is described or obvious from the available prior art.

2.2 Independent claim 4

Independent claim 4 defines an articulated arm

International application No.
PCT/FR2004/050138

Box No. V	Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement		
	including an actuation device as per claim 1. As		
	a result, claim 4 fulfils the PCT requirements of		
	novelty and inventive step.		

3. Dependent claims 3 and 5

Claims 3 and 5 are dependent on claims 1 and 4, respectively. As such, said claims therefore also fulfil the PCT requirements of novelty and inventive step.
